# About Gantiq

Much more than a  
logistics operator

## Your value chain

Gantiq was founded in the year 2007 by logistics professionals. Their wide expertise in the sector has been developed in **over 50 years implementing logistics within the customer's own facilities**. Its specialisation in the demanding automotive industry, allows it to implement the very high levels of quality, efficiency and automation typical of this industry in other sectors: food, healthcare and many more.

We are strategically headquartered in **Burgos** for the purpose of being able to offer a centralised and high-quality service.

Our added value is the multiple additional services that we offer to our customers, since they allow us to continue growing and improving together every day. Continuous improvement and a quality goal of zero faults. Nevertheless, we never leave aside the competitiveness and efficiency needs that markets currently demand.

## With Gantiq you will obtain:

A supplier that allows you to achieve **competitive advantages**.

A supplier that can be **an extension of your company**, which will allow you to be completely informed about the 100% of logistics and complementary services costs.

**Total control over your merchandise**, stocks and inventories in **real time**.

A supplier that allows you to **integrate your computing system**, i.e. **SAP**, in order to maintain good communication as if we were another department of yours.

A **quality** supplier highly prepared and qualified in accordance with your requests.

A **flexible** supplier that provides you with tailored solutions for your actual needs.

# Services Gantiq

## Warehouse

We have more than 12.000m2 of warehouse distributed among our 2 facilities located in the industrial estate of Villalonquéjar (Burgos). Several loading docks and 24 hr security. Your merchandise will be in the best hands.

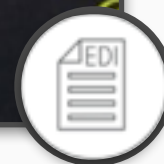

## Barcode scanning

Warehouse activity control, processes, relabelling, delivery note reading, quality tests and any other necessary process. All this tracking process is carried out by means of RF barcode scanners (wireless barcode readers). Efficiency and maximum control.

## Transfer and verification

Tests, containers changes, picking, fulfilment of the FIFO method, EDI sending and receiving; everything you need. Also, real-time stock checking by the customer (Intranet - web).

# Services Gantiq ...

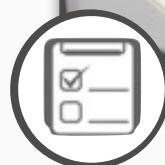

## Preassembly station

Occasionally -due to several suppliers' logistics, limited space resources, production adaptations, etc.- it is necessary to preassemble some components. In Gantiq we specialise in this type of process.

## Quality wall

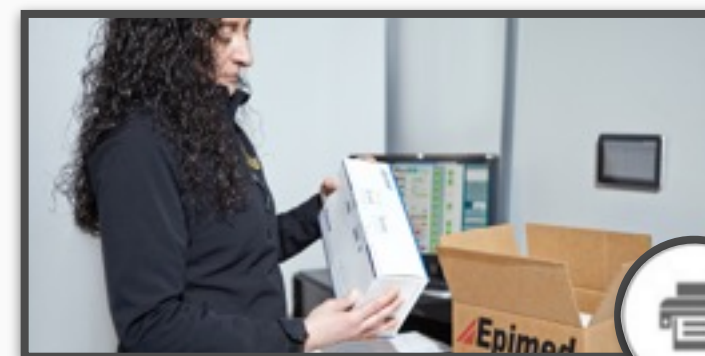

We implement quality walls and act as a customer-supplier liaison in order to achieve our top priority goal of zero faults. Much more than a logistics operator.

## Packaging and labelling

Packaging and processing according to customer specifications or to Gantiq's improvement proposals. Also, labelling with the corresponding new label for the final customer (our customer's customer). Possibility of SAP integration and labels and documents printing. We are an extension of your company.

# Services Gantiq ...

## Container assembly

Gantiq Logistics currently has a human team of assembly for containers of the automotive supply chain, which covers all the process from engineering to the final operator. Until now, we have assembled more than 9.000 units. We do an exhaustive analysis by being in contact with row material suppliers when carrying out the assembly process.

## Means of transport

Customer satisfaction comes after an excellent product delivered on time. In Gantiq, we work hard to fulfil this principle in every delivery. Our added value is the multiple services that we can offer: packaging, picking, quality wall, transfers, preassembly, labelling and special services. Nevertheless, we must also highlight our logistics capability as a result of our human team, our own vehicle fleet and our important agreements with the principal logistics operators.

# Gantiq Services

We are your best fellow traveller - Logistics engineering

## Warehouse

We have more than 12.000m2 of warehouse distributed among our 2 facilities located in the industrial estate of Villalonqu  jar (Burgos). Several loading docks and 24 hr security. Your merchandise will be in the best hands.

1

## Transfer and verification

Tests, containers changes, picking, fulfilment of the FIFO method, EDI sending and receiving; everything you need. Also, real-time stock checking by the customer (Intranet - web).

3

## Barcode scanning

Tracking and control by means of radio-frequency (RF) barcode scanners (wireless barcode readers). Efficiency and maximum control.

2

## Preambly station

Occasionally -due to several suppliers' logistics, limited space resources, production adaptations, etc.- it is necessary to preassemble some components. In Gantiq we specialise in this type of process.

4

## Packaging and labelling

Packaging and processing according to customer specifications or to Gantiq's improvement proposals. Possibility of SAP integration

6

## Quality wall

We implement quality walls and act as a customer-supplier liaison in order to achieve our top priority goal of zero faults. Much more than a logistics operator.

5

## Container assembly

We have a human team to work on this task. Supporting the automotive supply chain from engineering to the final operator.

7

## Transport

Own fleet, as well as excellent agreements with several operators.

8

# Supporting training and technology

Continuous improvement and innovation are the levers that allow us to make a difference.

## Supporting training

Our work team receives continuous training adapted to the peculiarities of every new project. We have grown up working for the demanding automotive industry. Thus, we are aware that corporate teaching and training for our team is the key for Gantiq's success.

## Investment in technology

RF barcode scanners, pick by voice, SAP integration, EDI system, customer Intranet, real-time stock control.

## Customer satisfaction

We are a safe bet on maximum efficiency. Our integration capability and our clear goal of zero faults results in our customer's full satisfaction. We will be noticed as an extension of your company.
